profiles do not require testing.

NOTE: ON Semiconductor has not listed any adoptable profile, so this test was not completed.

NOTE: You will need to provide a power supply connection for all samples, as a battery cannot support the current consumption in Test Mode for the duration of the test.

4. Create a new product listing. You will need to sign a Declaration of Compliance (DoC). Once the qualification process is done, your device is officially Bluetooth compliant. You may display the Bluetooth logo on your product.

### Putting the nRF51822 Radio IC into Test Mode

In order to put the radio IC into Test Mode, you will need to flash the Test Mode firmware onto the Ezairo 7150 SL hybrid. For detailed instructions, refer to Section 4.3 Downloading Firmware to the Radio on the BTE Hearing Aid in the Ezairo 7150 SL BTE Hearing Aid Reference Design User Manual.

NOTE: You will need to flash the device with the Hybrid\_DTM.hex provided instead of the firmware file (Ezairo7150SL\_HearingAid\_Sample.hex file) described in the Flashing the Radio Firmware section.

### *Emulating a UART Interface*

In the Ezairo 7150 SL BTE reference design, the UART interface of Ezairo 7150 SL is not exposed, so you will need

to use two DIO ports to pass through the UART interface. Ezairo 7150 SL sample code for the UART pass-through is provided in the Ezairo\_7150\_SL\_UART\_samplcode.zip file. Open the zip file in the Integrated Development Environment (IDE) provided in the Ezairo 7100 Evaluation and Development Kit (EDK).

In the default setting in *app.cfi*, **DIO6** and **DIO8** are set as **UART:**

```
intel6n16sin
```
