

BCool[™] Controller not a monitor AD

FEATURES

- Monitors two analog voltages or thermistor temperature inputs
- One on-chip and up to two remote temperature sensors with series resistance cancellation
- Controls and monitors the speed of up to two fans
- Automatic fan speed control mode controls system cooling based on measured temperature
- Enhanced acoustic mode dramatically reduces user

ACCELERATION

Bit 7: Acceleration sensor output data format (0: g, 1: m/s²)

ACCELERATION SENSOR CONTROL 1

Bit No.	Name	Read/Write	Description
0	TH1/REM2	Read/Write	When this bit is set, Fan 2 speed is controlled by TH1 if Pin 11 is configured for thermistor, or by Thermal Diode 2 if Pin 11 is configured for thermal diode.
1	TH2	Read/Write	When this bit is set, Fan 2 speed is controlled by TH2 if Pin 12 is configured for thermistor.
2	REM1	Read/Write	When this bit is set, Fan 2 speed is controlled by Remote Temperature Input 1.
3	LOC	Read/Write	When this bit is set, Fan 2 speed is controlled by the local temperature input.
4	MAN	Read/Write	When this bit is set, Fan 2 speed is under user control by writing directly to the DRIVE2 register. This overrides all lower bit settings.
5	MIN	Read/Write	When this bit is set, Fan 2 runs at minimum speed. This overrides all lower bit settings.
6	STRT	Read/Write	When this bit is set, Fan 2 runs at startup speed. This overrides all lower bit settings.
6	MAX	Read/Write	When this bit is set, Fan 2 runs at maximum speed. This overrides all lower bit settings.
