

Features

- 1200 V 35 A 3-Phase FS7 IGBT Inverter, Including Control ICs for Gate Drive and Protections
- Very Low Thermal Resistance Using Al2O3 DBC Substrate
- Active Logic Interface
- Built-in Under-voltage Protection (UVP)
- Built-In Bootstrap Diodes/Resistors
- Separate Low-side IGBT Connections for Individual Current Sensing of Each Phase

NFAM3512L7B

PIN DESCRIPTION

Pin	Name	Description
1	VS(U)	High-Side Bias Voltage GND for U Phase IGBT Driving
(2)	-	Dummy
3	VB(U)	High-Side Bias Voltage for U Phase IGBT Driving
4	VDD(UH)	High-Side Bias Voltage for U Phase IC
(5)	-	Dummy
6	HIN(U)	Signal Input for High-Side U Phase
7	VS(V)	High-Side Bias Voltage GND for V Phase IGBT Driving
(8)	-	Dummy
9	VB(V)	High-Side Bias Voltage for V Phase IGBT Driving
10	VDD(VH)	High-Side Bias Voltage for V Phase IC
(11)	-	Dummy
12	HIN(V)	Signal Input for High-Side V Phase
13	VS(W)	High-Side Bias Voltage GND for W Phase IGBT Driving
(14)	-	Dummy
15	VB(W)	High-Side Bias Voltage for W Phase IGBT Driving
16	VDD(WH)	High-Side Bias Voltage for W Phase IC
(17)	-	Dummy
18	HIN(W)	Signal Input for High-Side W Phase
(19)	-	Dummy
20	VTS

ABSOLUTE MAXIMUM RATINGS (VDD = 15 V and Tj = 25°C, Unless Otherwise Specified)

Symbol	Parameter	Test Condition	Max	Unit
INVERTER PART				
VPN	Supply Voltage	Applied between P – NU, NV, NW	900	V
VPN (surge)	Supply Voltage (Surge)	Applied between P – NU, NV, NW (Note 1)	1000	V
Vces	Collector – Emitter Voltage		1200	V
VRRM	Maximum Repetitive Reverse Voltage		1200	V
± Ic	Each IGBT Collector Current		35	A
± Icp	Each IGBT Collector Current (Peak)	Tc = 25°C, Tj ≤ 150°C, under 1 ms Pulse Width	70	A
Pc	Collector Dissipation	Tc = 25°C per one chip (Note 2)	167	W
Tj	Operating Junction Temperature		-40 ~ 150	°C

CONTROL PART

VDD	Control Supply Voltage	Applied between VDD(H), VDD(L) – VSS	20	V
VBS	High–Side Control Bias Voltage	Applied between VB(U) – VS(U), VB(V) – VS(V), VB(W) – VS(W)	20	V
VIN	Input Signal Voltage	Applied between HIN(U), HIN(V), HIN(W), LIN(U), LIN(V), LIN(W) – VSS	-0.3 ~ VDD + 0.3	V
VFO	Fault Output Supply Voltage	Applied between VFO – VSS	-0.3 ~ VDD + 0.3	V
IFO	Fault Output Current	Sink Current at VFO pin	2	mA
VCIN	Current Sensing Input Voltage	Applied between CIN – VSS	-0.3 ~ VDD + 0.3	V

TOTAL SYSTEM

VPN(PROT)	Self–Protection Supply Voltage Limit (Short Circuit Protection Capability)	VDD = VBS = 13.5 ~ 16.5 V, Tj = 150°C, Non–repetitive, < 2μs	800	V
Tc	Case Operation Temperature	See Figure 1	-40 ~ 125	°C
Tstg	Storage Temperature		-40 ~ 125	°C
Viso	Isolation Voltage	60 Hz, Sinusoidal, AC 1 minute, Connection Pins to Heat Sink Plate	2500	V _{rms}

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Surge voltage developed by the switching operation due to the wiring inductance between P and NU, NV, NW terminal.
2. Calculation value considered to design factor.

THERMAL RESISTANCE

Symbol	Rating	Conditions	Min	Typ	Max	Unit
Rth(j–c)Q Rth(j–	Junction to Case Thermal Resistance (Note 3)	Inverter IGBT Part (per 1/6 Module)	–	–	0.75	°C/W

NFAM3512L7B

ELECTRICAL CHARACTERISTICS (VDD = 15 V and Tj = 25°C, Unless Otherwise Specified)

Symbol	Description	Conditions	Min	Typ	Max	Unit

Typical Application Circuit

Input Signal

To avoid malfunction, the wiring of each input should be as short as possible (less than 2–3 cm). Each capacitor should be mounted as close to the pins of the product as possible. VFO output is open–drain type. This signal line should be pulled up to the positive side of the MCU or control power supply with a resistor that makes IFO up to 1 mA. Please refer to Figure 5.

NOTES:

9. Input signal is active–HIGH type. There is a 5 k Ω resistor inside the IC to pull–down each input signal line to GND. RC coupling circuits should be adopted for the prevention of input signal oscillation. RC time constant should be selected in the range 50 ~ 150 ns. (Recommended R = 100 Ω , C = 1 nF)
10. Each wiring pattern inductance should be minimized (Recommend less than 10 nH). Use the shunt resistor of surface mounted (SMD) type to reduce wiring inductance. To prevent malfunction, wiring should be connected to the terminal of the shunt resistor as close as possible.
11. In the short–circuit protection circuit, please select the RC time constant in the range 1.5 ~ 2 μ s. Do enough evaluation on the real system because short–circuit protection time may vary wiring pattern layout and value of the RC time constant.
12. To prevent surge destruction, the wiring between the snubber capacitor and the P & GND pins should be as short as possible. The use of a high–frequency non–inductive capacitor of around 0.1 ~ 0.22 μ F between the P & GND pins is recommended.
13. The zener diode or transient voltage suppressor should be adopted for the protection of ICs from the surge destruction between each pair of control supply terminals (Recommended zener diode is 22 V / 1 W, which has the lower zener impedance characteristic than about 15 Ω).
14. VDD electrolytic capacitor is recommended around 7 times larger than VBS electrolytic bootstrap capacitor.
15. Please choose the VBS electrolytic bootstrap capacitor with good temperature characteristic.
16. 0.1 ~ 0.2 μ F R–category ceramic capacitors with good temperature and frequency characteristics is recommended.
17. Fault out pulse width can be adjusted by capacitor connected to the CFOD terminal.
18. To prevent protection function errors, CIN capacitor should be placed as close to CIN and VSS pins as possible.
